

SKILLS	Machine Learning & CV: PyTorch, OpenCV, Pandas, Roboflow, Colab Languages: Python, Java, JavaScript, MATLAB; working knowledge of C++/C Tools: GitHub; familiarity with Docker and Agile methodologies (Jira)
EDUCATION	Rutgers School of Engineering, New Brunswick , NJ — <i>Honors Academy Student</i> September 2022 - May 2026 • Majors: Computer Engineering and Computer Science. • Cumulative GPA: 3.96 • Member of Tau Beta Pi Engineering Honors Society, NJ Beta Chapter • Currently Enrolled: Formal Languages and Automata, Intro to Cryptography • Completed courses: ML Principles, Robotics and Computer Vision, Intro to Deep Learning (PyTorch), Intro to AI (Python), Intro to Data Science (Pandas), Design and Analysis of Computer Algorithms, Intro to Computer Systems (Shell scripting, C, Linux), Computer Architecture and Assembly Language (RISC-V, C), Software Engineering (JavaScript), Data Structures (Java).
EXPERIENCE	Prudential Financial — <i>Global Technology Software Engineering Intern</i> June 2025 - August 2025 • Built a dashboard for Corporate Technology dept. employees to search for AWS project costs and related resources. • Developed React frontend and FastAPI backend, containerized with Docker. • Implemented OIDC authentication using Microsoft Entra ID. • Deployed the app to the dev environment via Jenkins pipeline and CloudFormation template. • Applied Agile practices to drive project development. ProximaVision Aerospace — <i>Systems Engineering Intern</i> December 2024 - January 2025 • Learned about and contributed to the development of a tethered drone at a startup. • Programmed in C++, using Teknic's sFoundation libraries to perform tests on a winch. • Programmed in Python using the TYTO Robotics Flight Stand API to perform tests on propellers.
PROJECTS	Metal Nut Defect Detector — <i>AI Engineer</i> September 2025 - May 2026, Rutgers Engineering capstone project sponsored by P&R Fasteners • Collaborated on an AI pipeline to detect defective metal nuts so they don't reach customers. • Fine-tuned YOLOv6 model from Roboflow for segmentation of individual metal nuts in a batch. • Used homographies to identify the same nut across multiple image views. (Colab pipeline). AI-Generated Jira Tickets — <i>Software Engineer</i> July 2025, Prudential Global Technology Summer Intern Hackathon • Collaborated with peers to build a website that uses AI to generate Jira tickets from meeting notes, with editing and direct board integration. • Contributed to integration of the AI model and Jira into the app (Ollama API, Jira API). Chess-Playing Robot — <i>Embedded Systems Developer</i> January 2024 - April 2024 • Collaborated with peers to design a chess-playing robot. (View GitHub). • Established communication between the motors, user interface, camera, and the program that detects chess pieces and determines the next best move. (Python.) • Assisted with chess piece recognition. (Python.)
